Changing boot configuration
By default, your Jenkins runs at https://localhost:8080/. This can be changed by editing jenkins.xml , which is located in your installation directory. This file is also the place to change other boot configuration parameters, such as JVM options, HTTPS setup, etc.
Starting/stopping the service
Jenkins is installed as a Windows service, and it is configured to start automatically upon boot. To start/stop them manually, use the service manager from the control panel, or the sc command line tool.
Inheriting your existing Jenkins installation
If you'd like your new installation to take over your existing Jenkins data, copy your old data directory into the new JENKINS_HOME directory.

Question
Answer
17 edited Sep 23, 2022 at 13:25
I was having a similar problem on windows where the folder was missing. I went to C:\Program Files\Jenkins and opened jenkins.err.log It had the key that I needed to proceed.
